Milestone 4:- Module 7: QA Checklist

This checklist covers the four verification tasks defined for Module 7 (Testing and Validation): validate KPI calculations, verify ranking calculations, test dashboard interactions, and validate educational metrics. It is intended to be worked through once per release before the workbook is published or shared.

1. Data and KPI Accuracy:

#	Check Item	How to Verify	Status	Notes
1	Total university count matches the source ranking file for the selected year.	Compare Total Universities KPI card to a row count in university_final_dataset.xlsx.	Pass	
2	Global Ranking Score (rank 1) matches the top row of the source ranking.	Cross check Top Global Ranking card against QS/THE source file.	Pass	
3	Average Overall Score is a plausible value (0 to 100 range).	Read KPI card, confirm range.	Pass	
4	International Student Percentage is between 0 and 100 for every institution.	Sort the underlying field ascending and descending in a text table.	Pass	
5	Faculty to Student Ratio has no zero or negative denominators.	Sort student_staff_ratio ascending, inspect lowest values.	Pass	
6	Research Impact Score components (research, citations, industry income) sum or combine as documented.	Spot check 5 institutions against source columns.	Pass	
7	Research Productivity Index values are normalized and comparable across institution sizes.	Compare two institutions of very different size.	Pass	
8	No fabricated or placeholder identifiers exist in university_id or country_id.	Filter for nulls or default values in ID fields.	Pass	0 found

2. Ranking Calculations:

#	Check Item	How to Verify	Status	Notes
1	rank_2024_numeric sorts ascending and matches source order.	Sort Top University Rankings in 2024 table, compare to source.	Pass	

#	Check Item	How to Verify	Status	Notes
2	rank_2025_numeric sorts ascending and matches source order.	Sort Top University Rankings in 2025 table, compare to source.	Pass	
3	Top N parameter correctly limits both ranking tables to the chosen count.	Change Top N from 20 to 10 and 50, confirm row counts.	Pass	
4	Country Ranking Comparison orders correctly for the selected indicator.	Change Select Education Indicator parameter, confirm re-sort.	Pass	
5	Top Performing Countries leaderboard has no duplicate country rows.	Visual scan plus a count distinct check.	Pass	

3. Dashboard Interactions:

#	Check Item	How to Verify	Status	Notes
1	Year quick filter updates all KPI cards and charts on every dashboard.	Change Year, confirm every visible number changes accordingly.	Pass	
2	Region quick filter updates all region colored charts consistently.	Change Region, confirm map, donut, and bar charts agree.	Pass	
3	Country quick filter narrows university and country level content correctly.	Pick one country, confirm only related rows remain.	Pass	
4	Subject Area quick filter affects Research Analytics as expected.	Change Subject Area, confirm Research Analytics content updates.	Pass	
5	Selecting a university row highlights or filters related charts on the same dashboard.	Click a row in Top University Rankings, observe other charts.	Pass	
6	Selecting a region in the legend highlights that region across the dashboard.	Click a region in the Region legend on Research Analytics.	Pass	
7	Reset Filters (or equivalent) returns all controls to default.	Change several filters, then reset, confirm defaults restored.	Pass	
8	DASHBOARDS parameter and dashboard tab navigation both reach all four analytical dashboards.	Use tabs and the parameter control to reach each dashboard.	Pass	

#	Check Item	How to Verify	Status	Notes
9	EduVision DV home dashboard shows no overlapping or double exposed charts.	Open home dashboard, visually confirm a single clean layout.	Pass	Defect found and fixed, see Testing Report

4. Educational Metrics Validation:

#	Check Item	How to Verify	Status	Notes
1	Faculty to Student Ratio is displayed as a readable ratio (for example 1 to 17.3), not a raw decimal.	Visual check on Student Analytics KPI cards.	Pass	
2	Gender split fields (Female Pct, Male Pct) sum to approximately 100 percent where both are reported.	Spot check 10 institutions.	Pass	
3	Country Comparison indicator values fall within plausible bounds for their unit (percent fields between 0 and 100).	Check Minimum and Maximum Indicator Value cards per indicator.	Pass	
4	Year over year KPI change indicators (for example plus 2.4 vs 2023) compute against the correct prior year.	Manually recompute one KPI's year over year change.	Pass	
5	No institution appears with an international student percentage above 100 percent.	Sort field descending, inspect top value.	Pass	

5. Visual and Formatting Consistency:

#	Check Item	How to Verify	Status	Notes
1	All five dashboards use the same background color, font color, and accent color.	Visual scan across all dashboard tabs.	Pass	
2	No visible gridlines, row dividers, or stray border lines on any worksheet.	Visual scan, zoom in on chart edges.	Pass	
3	KPI card numbers are legible at default zoom on a standard laptop screen.	View at 100 percent zoom, 1366 by 768 resolution.	Pass	
4	Titles and captions are not truncated or overlapping on any dashboard.	Visual scan of every dashboard.	Pass	

6. Pre-Publish Housekeeping:

#	Check Item	How to Verify	Status	Notes
1	Draft or duplicate dashboard tabs consists (COPY dont del, Dashboard dont del, INFO, uppercase duplicates).	Reviewed the dashboard tab list before final export.	Pass	See Final Documentation, Section 12
2	Workbook saved as a packaged workbook (.twbx) with the data extract embedded.	File, Save As, confirm .twbx and file size includes data.	Pass	
3	File naming matches the delivery convention (EduVision_DV.twbx).	Check file name before upload.	Pass	

Sign off: all items above marked Pass are considered verified for this release. Items marked Open should be resolved before external publication.
