EduVision DV

Dashboard TestingReport—Module7:Testing and Validation

Project: Higher Education Performance Dashboard
Workbook: EduVision_DV.twbx
Testing focus: KPI calculations, ranking calculations, dashboard interactions, educational metrics, visual consistency, and release housekeeping.

1. Purpose and Scope

This report records the Module 7 checks carried out for the EduVision DV Tableau dashboard project. The dashboard suite includes University Overview, Research Analytics, Student Analytics, and Country Comparison. The testing checklist was organized using the supplied reference checklist, with items adapted to the controls and four-dashboard structure used in this project.

2. Test Approach

The workbook and its interactive features were reviewed in Tableau during a guided walkthrough. The results in this report are based on the outcomes reported during that walkthrough. The raw dataset, detailed calculation worksheets, and independent source-data recomputations were not attached; therefore, the report does not claim an independently measured KPI accuracy percentage.

3. Results Summary

Testing Area	Result	Recorded Outcome
Workbook opening	Pass	Workbook reportedly opened without errors.
KPI calculations	Pass — user-confirmed	KPI check was reported as passed; source-value comparison was not attached.
University ranking	Pass — user-confirmed	Ranking order was reported correct.
Top N controls	Pass	Top N values 10, 20, and 50, including ranking order after changes, were reported working.
Country comparison indicator	Pass	Chart/leaderboard was reported to update when the indicator changed.
Navigation and filters	Pass	Home and all four dashboards, plus Year, Region, Country, and reset controls, were reported working.
Educational metrics	Pass — user-confirmed	Faculty-to-student ratio, gender percentages, international student percentage, and year-over-year change were reported passed.
Visual consistency	Pass	Styling, gridlines/borders, KPI readability, and titles/captions were reported acceptable.
Release housekeeping	Pass	Packaged workbook save/reopen and dashboard tab checks were reported passed.

4. Defects and Corrective Actions

No defects were reported during the walkthrough. This means that no defects were reported in the recorded results; it should not be interpreted as an independent technical audit proving that no defects exist. If an issue is found later, record the dashboard, reproduction steps, expected result, actual result, severity, and corrective action.

5. Limitations and Evidence

- The pass statuses reflect the outcomes reported during the walkthrough.
- Raw KPI values and source-data comparisons were not attached for independent numerical verification.
- The project roadmap lists a KPI accuracy target above 95%. That target should only be stated as achieved after documented calculations or systematic comparisons against source data support it.
- Screenshots of the main interactions and the final saved .twbx file can be retained as supporting project evidence.

6. Conclusion

Based on the recorded walkthrough, the workbook opened successfully, ranking and Top N interactions behaved as expected, dashboard navigation and global filters worked, educational metric checks were reported as passing, and visual and housekeeping checks were completed. The Module 7 checklist and this report document those outcomes. Independent numerical verification of the KPI accuracy target remains outstanding.
