

EduVision_DV — Higher Education Performance Dashboard

Dashboard Storyboard

Milestone 2 — Module 4: Dashboard Planning & Prototyping

Deliverable: **dashboard_storyboard.pdf**

Covers: layout wireframes, filters, navigation, dashboard actions, and interactive comparisons for all four dashboards — University Overview, Research Analytics, Student Analytics, Country Comparison.

Prepared for Tableau build — Milestone 3

How to Read These Wireframes

Each dashboard page shows a low-fidelity layout, the exact source columns behind each panel, and the filter / navigation / action rules for that dashboard.

- Filter chip (top bar)
- KPI card / chart panel
- Chart placeholder area

Wireframes are intentionally low-fidelity (box-and-label) — the point of Module 4 is agreeing on structure, fields, filters, and interactions before investing time in polished Tableau formatting.

Dashboard 1 — University Overview

Base data: 01 University Overview (master, QS 2025, 1,503 universities)

Filters

Filter	Field	Scope	Notes
Region	region	Global (all 4 dashboards)	Single/multi-select dropdown
Country	country_name	Global (all 4 dashboards)	Dependent on Region selection
Rank Band	rank_2025_band	Local (this dashboard only)	Groups universities into rank tiers

Navigation & Actions

Type	Rule
Navigation	Left sidebar button "Overview" (active state) — always visible across all 4 dashboards
Dashboard Action	Click a university row in the Top-10 table → filters Research Analytics & Student Analytics to that university_id

Interactive Comparison

Multi-select up to 5 universities → highlights them on the scatter plot and enables a side-panel comparison table

Dashboard 2 — Research Analytics

Base data: Six KPIs / University Final Dataset (918 universities, THE 2024 primary + WUR 2023 fallback)

Filters

Filter	Field	Scope	Notes
Region	region	Global	Shared with all dashboards
Country	country_name	Global	Shared with all dashboards
Research Year	research_year (2024 / 2023)	Local	Lets user isolate THE-2024-sourced vs WUR-2023-sourced universities

Navigation & Actions

Type	Rule
Navigation	Sidebar button "Research Analytics"
Dashboard Action	Click a university bar → filters Student Analytics to the same university_id

Interactive Comparison	Parameter-driven radar chart: pick 2–4 universities to overlay their score composition
Tooltip	research_impact_score_source / research_data_source shown on hover so viewers know THE-2024 vs WUR-2023 origin

Dashboard 3 — Student Analytics

Base data: 02 Research Analytics (THE 2024) + 03 Student Analytics (WUR 2023) — demographic & ratio fields

Filters

Filter	Field	Scope	Notes
Region	region	Global	Shared with all dashboards
Country	country_name	Global	Shared with all dashboards
Source	rank_type / data source (THE 2024 vs WUR 2023)	Local	02 and 03 overlap on 761 universities — toggle to compare sources

Navigation & Actions

Type	Rule
Navigation	Sidebar button "Student Analytics"
Dashboard Action	Click a country on the heat map → filters University Overview and Country Comparison to that country_id

Interactive Comparison	Side-by-side small multiples for up to 3 selected universities (gender split + ratios)
Data quality note	Imputed gender values (female_pct_imputed = True) shown with a distinct marker/opacity so viewers can tell direct vs imputed data apart

Dashboard 4 — Country Comparison

Base data: 04 Country Comparison (World Bank indicators, 104 countries synced to master) + 01/Six KPIs for ranking aggregates

Filters

Filter	Field	Scope	Notes
Indicator	indicator_name (13 options)	Local	Single-select — e.g. GDP per capita PPP, tertiary enrolment ratio
Year	year (1970–2016)	Local	Independent timeline — does not sync with overview_year/research_year (2023–2025)
Income Group	income_group	Local	World Bank income classification
Region	region	Global	Shared with all dashboards

Navigation & Actions

Type	Rule
Navigation	Sidebar button "Country Comparison"

Dashboard Action	Click a country bar/map mark → filters University Overview to that country_id
Interactive Comparison	Select 2–5 countries → overlays them on the benchmarking line chart
Known gap	Taiwan (TW) and Northern Cyprus (CY-N) appear in the master university list but have no World Bank rows — shown as "no data" rather than zero/blank

Cross-Dashboard Integration

How the four dashboards connect into a single, navigable workbook

Navigation Pattern

Persistent left sidebar (visible on every dashboard) with 4 buttons: **Overview**, **Research Analytics**, **Student Analytics**, **Country Comparison**. Built as a floating vertical container with Dashboard → Navigate actions, styled dark to match the theme shown in the reference screenshot. The active dashboard's button is highlighted.

Global Filters (apply across all 4 dashboards)

Filter	Field	Applies to
Region	region	All 4 dashboards
Country	country_name / country_id	All 4 dashboards

Dashboard Actions Map

Trigger (source dashboard)	Effect (target dashboard)
Click a university — University Overview	Filters Research Analytics + Student Analytics to that university_id
Click a university — Research Analytics	Filters Student Analytics to that university_id
Click a country — Student Analytics or Country Comparison	Filters University Overview to that country_id
Reset Filters button (any dashboard)	Clears all filter/highlight actions workbook-wide

Interactive Comparisons (workbook-wide pattern)

Comparison	Mechanism
Compare 2–5 universities	Multi-select parameter driving a shared color highlight across Overview + Research Analytics charts
Compare 2–5 countries	Multi-select parameter driving the Country Comparison benchmarking line chart
Compare THE-2024 vs WUR-2023 sourced universities	research_year / data-source toggle on Research & Student Analytics

Prototype Scope Note

The companion deliverable **eduvision_prototype.twbx** should implement this storyboard at rough fidelity in Tableau Desktop: real chart types placed in the layouts above, with global filters and the dashboard actions listed working end-to-end. Full visual polish (theme colors, fonts, KPI card icons) is intentionally deferred to Milestone 3.
